## Large Pile Precision Plating and Doubling/Plating Machine DL3HS

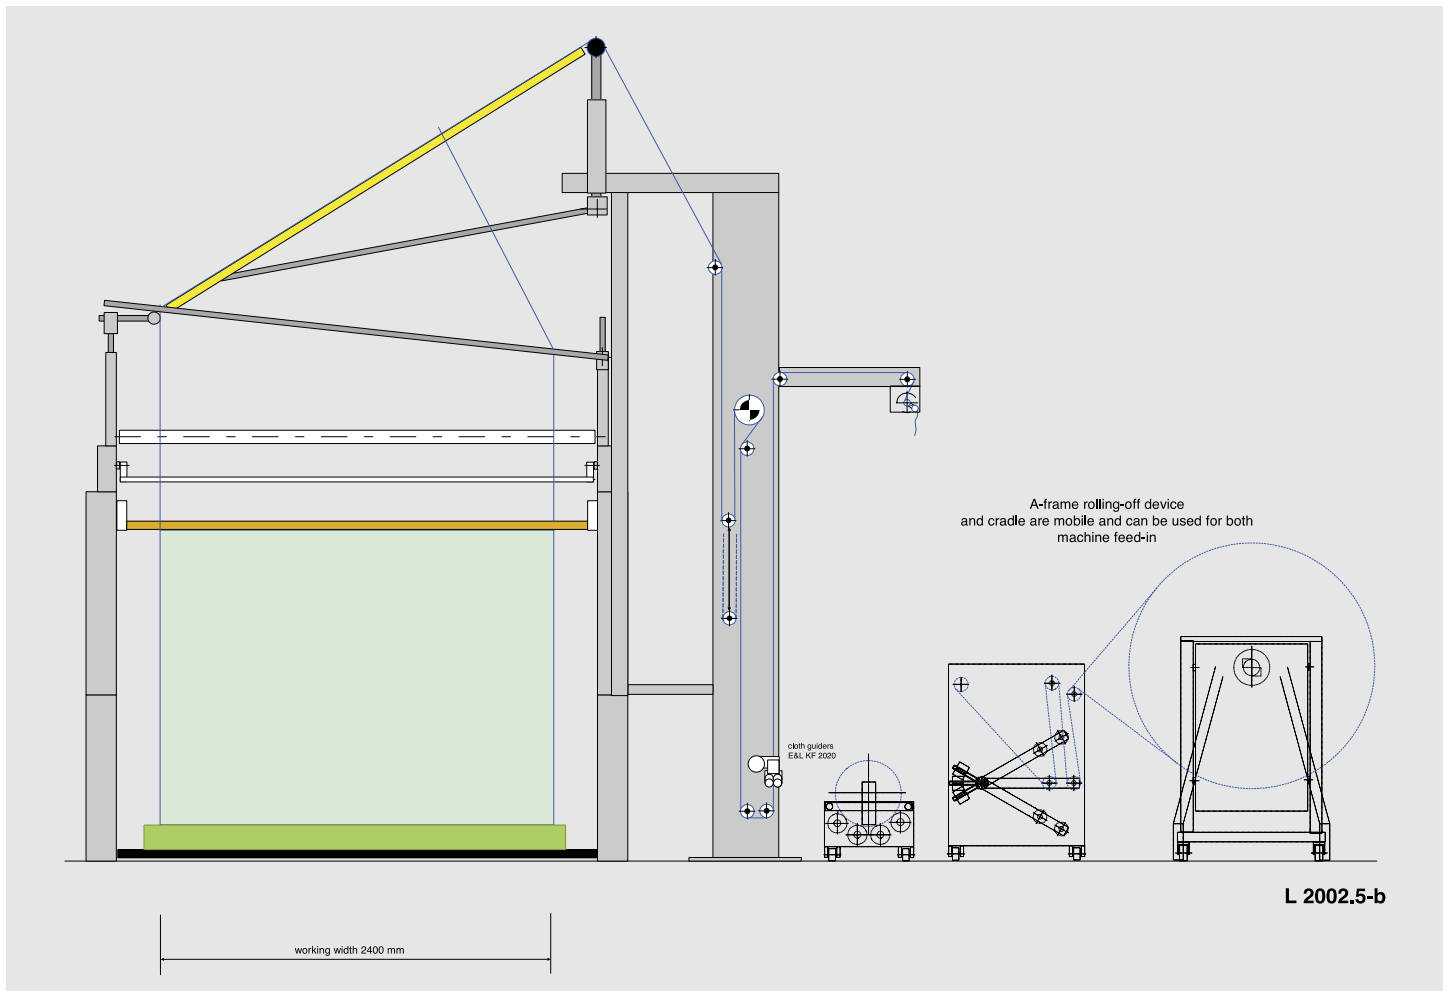

**An efficient machine to make-up  
a precision pile onto pallets, for long  
length of grey cloth, ready for trans-  
port or easy storage.**

Frequently this machine is also set-up  
in line with a finishing machine to form  
a complete production unit.

## Technical details >>>

- Infinitely variable plating speeds up to 80 m/min by electric AC drive
- Precision layer of 1-metre or 1-yard length, or on special demand both
- Calibrated layer length, approved by a European board of weights and measurements
- Max. pile height 200 cm
- Max. web width up to 240 cm for full with plaiting or up to 400 cm in combination with the doubling (length folding) device
- Fabric feed-in from giant rolls (A-frames) or loose pile or small rolls (e.g. loom beam)
- Automatic re-setting of table lowering device according to different cloth thicknesses – without the necessity of any manual adjustments
- Layer identification which advances any required layer by approx. 3 cm to make visible the layer containing a seam (automatic seam detector) or a pre-selected fabric length
- Doubling (length folding) device with automatic selvage guider for fully automatic edge-on-edge doubling
